Always up for a challenge ·
Attention to details

Education

University of Oxford
Bachelor of Arts in Computer Science
Completed in 2019

Dedicated and detail-oriented Front-end developer with 2+ years of professional experience. Eager to implement products that follow up-to-date best practices. Special interest in building cool apps and writing clean reusable code. Proud of my work and always looking to learn more!

Professional experience

3SStudio – Sked24 | Front-end developer
Nov 2020 – Present

Sked24 is a large, versatile product that medical providers all across Chile use for managing time, handling physicians, scheduling appointments, and more.

As an Angular developer within a product-centered small agile team, I work closely with the back-end team to bring the API to life. In the bi-weekly meetings, we discuss the implementation of new long-lasting features and the best way to maintain the product.

Key responsibilities:

- Work closely with the RESTful API by building OData queries and mapping JSON requests and responses
- Build consistent interface designs with a focus on user experience, responsiveness, and legacy browser support
- Follow current and company best practices in regards to, but not limited to, Git version control naming, ESLint / TSLint configurations, code in general
- Apply the scout rule on a daily basis: "Always leave the code better than you found it"
- Manage NPM packages and retention rules on MyGet
- Closely review teammates' pull requests and improve upon them by asking deep related questions and helping out when possible
- Publish changes directly to the clients with TeamCity and Octopus Deploy

Achievements (in less than two years):

- Implemented and optimized the new version of the patient app used to book over 500K appointments each month
- Vastly improved developer experience and code efficiency by writing AutoHotkey scripts for the team
- Built an easy-to-use PDF + Image viewer with features such as zooming, rotating, and printing
- Reduced Jasmine test times by analyzing and optimizing the tests
- Implemented complex filters logic for searching appointment slots
- Added a lite version for one of the libraries created by the company by utilizing the same codebase and NPM scripts
- Implemented multiple calendars for scheduling with FullCalendar
- Built a developer- and user- friendly interface from scratch for managing configurations with reusable and consistent components
- Greatly reduced the development time for a feature type by utilizing Angular Schematics
